

1. Download the installer by selecting your computer type, county, and office location, then clicking "Download Package".
2. Locate the downloaded folder (default will be your downloads folder found in the left sidebar of the Finder). If the folder is zipped, Double clicking should extract the files from the zipped folder to a new folder with same name.
3. Locate the installer file within the folder and double-click it to open.
4. You will likely receive a warning about the software being unverified. Click "Show in Finder" on this warning.

5. Now, Right-Click (or control-click on some macs) on the same installer file and choose "Open" from the menu.

6. This time, the warning should give you another option. Click “Open.”

7. You will be prompted to enter your password for your computer (or touch ID) to authorize the install.
8. After authorizing, wait for the installer to finish.

9. If completed successfully, you will see a dialog box congratulating you on a successful installation.
